Game concept (general)

Up and Down (UD) is a 2D or 3D multiplayer card game. The main goal is to get as many guesses correct and use the special effect cards as efficient as possible. The Game is based on rounds where the “dealer” or the table master plays a card. The card is from a classic French Suited card deck (52 cards in total). The player now tries to guess if the next card is higher, lower or the same in value than the card dealt by the table master. If the player guesses right, he will go to the next round, where he can guess again. If he is wrong, he will lose this round. The player gains Points for every round he manages to survive, and the highest scores are displayed in a leaderboard. The game is generally free to play (exeption casino version), and the player has unlimited tries. However, the special booster cards cost some diamonds (ingame currency) to buy. He can buy diamonds and some character designs (skins) in the ingame shop.

The player completes the game if he is able to guess all cards in the deck correctly (higher,lower or same value) and the game master has played the last card.

Following the description of how a multiplayer game round looks like:

All players (up to 10 per lobby, flexible lobby settings possible, every player can set up own lobby, entering a lobby with lobby key is possible for private lobbies), spawn in the spawning area (around the playing table). Every player will get 3 main cards (Up-Card, Down-Card, Even-Card) in his hand and he can always place up to 5 special effect cards in his hand as well. The effect card slots can always be changed and the player can access cards he has purchased before the active round has started. If he purchases a special effect card during an active round, the card will be only available after the next active round started. After spawning to the seats, the game master (GM) will start the game with drawing his first card from his hand. The GM always holds 7 cards in his hand and has a starting deck of 52 cards (French-suited card set) in total. The hand of the GM is not visible to the players. Only special effect cards could reveal some parts or the whole hand from the GM to players who play the special effect card. More on this in the section special effect cards. The GM chooses the cards he plays always at random from his 7 hand cards! Now the placing phase of the player starts. All players must place one of their main cards (Up, Down, Even) cards within the next 10 Seconds and they can play up to one more special effect card, if they have one in their hand to their special effect card slot. If the player fails to play a card, he will lose the round automatically. Every player can only play one card per round. There are four card categories, which the player can choose from:

1) Up-Card: If the Up-Card is played, the player guesses, that the next card played by the GM will be of higher value than the current card.
2) Down-Card: If the Down-Card is played, the player guesses, that the next card played by the GM will be of lower value than the current card.
3) Even-Card: If the Even-Card is played, the player guesses, that the next card played by the GM will be of the same value than the current card.
4) Special Effect Card: The special effect cards do contain special effects, which influence the round of the player. More Details about those cards in the special effects card section.

The player now places his card of choice. If the countdown of 10 Seconds has run down to zero seconds or every player has played a card, the game phase ends and the new game phase starts. This game phase is called exchange. During the exchange phase, player can leave or join lobbies. If there is no player waiting for entry, the game will go to the next round. If a player decides to leave, he can do that at any point in time, but his seat will only be free when the next exchange phase takes place (if a player already disconnected from the active round before the exchange round, his avatar will be disconnected from the lobby and his seat will become free). If a player fails to play any card for 3 consecutive rounds, he will be disconnected from the lobby during the next exchange phase. During the exchange phase all entry animations will be played out (see Character -> animations for more information), Also the name and title of the joining player(s) will be displayed in the chat menu. After the exchange phase has been completed, the next phase starts, where the GM draws a new card. After filling his hand up to 7 again with drawing a new card he can now play a random card from his hand again. If the newly played card is higher, than the last played card, every player who has played the higher card will win and proceed to the next round. If the same value or a lower value card has been played out by the GM, the respective party who has chosen the correct card will progress. All other players will be eliminated from this game round. If a special effect card has been activated, the effect might help a player to survive a round.

After the GM placed his card, another 10 second cooldown starts, and the players turn begin again. When the Countdown starts, the player gains a new Up-, Down-, or Even-Card if they have played it last round. For example, a player played an Up-Card and was correct, he will get a new Up-Card again to play this round. The special effect cards will not be replaced but the player can bring a new special effect card from his inventory deck to the free space in his hand.

The game ends if the GM can not draw any new card from his deck and all his hand cards are played and after evaluating the result of the last played card from the GM there is still a player in the game or when all players are eliminated. Leaderboard points are given to all players depending on their success in the game.

Now we understand the general game concept and design and we are able to dive deeper into the different aspects of the game development.

Game mode rapid

The rapid game mode is similar in terms of the gameplay but has some differences. The card deck is unlimited with cards. That means, if the dealer plays a card, it will get back into the deck and therefore the game can be continued limitless, until the player gets eliminated. Rapid game mode is a single player mode, where player can go for high scores and play fast rounds without having any play delay because of other players and decision making times.

Multiplatform & Cross platform

The game needs to run on Android **and** IOS. The game needs to be cross platform compatible from the very beginning. This means, that adroid players need to be able to join IOS lobbies and IOS players need to be able to join Android lobbies. It is preferred to code the game in Unreal engine, but other engines or coding bases are possible. Please make a proposal in your offer, which platform you would choose and why.

General game style

The general game art style is Stylized (cartoony). The whole environment needs to be bright and deep coloured, fun and for all age groups.

We do not want to have firearms in our game and the game should be for kids as well. No blood, no unnecessary harm to objects, no oversexualized content, etc.

The characters need to be “Jimmy Neutron”/Bubble head like, with big round heads and smaller bodies. More in Character design.

All maps and characters need to be in 3D (Jackpot mode different).

Map

The standard map is in a room with a play table with chairs around it and the GM at the table. There can be many different room environments like one in a bar, one at the beach, one on the moon, one on a rift in the ocean, in a circus, an office setup/meeting room, etc.. The sky is the limit if it comes to map/room design. Important, not every room is accessible for every player. Some rooms need to be purchased or unlocked with game progress or high score triggers (get 20 cards correct in a row and unlock this special room).

The main point on every map is, that it will be a look down (with an angle) map and it needs to be fun to watch at it. It needs to have details and it needs to set a certain mood. A bar map needs to set a bar mood, a Moon map needs to set the Moon feeling and so on.

The Spawn point on the map for all players and need to be set and coded. Generally, the player will be placed around the table on the existing seats. As long as a chair is free, a player can join in (if there are no lobby restrictions like a password) and all player spawn randomly around the table.

First 5 Maps:

1) Beach
2) Pirate ship
3) Moon (can be unlocked by purchasing in the store)
4) Circus (can be unlocked with the achievement of hitting 13 in a row, see Achievement list for more details)
5) VIP Room/Lounge (only accessible for VIPs)

Character

The player can choose either a predefined character to play with or design his own character (costs ingame currency and will be developed in a later stage of the game) with a character designer (plugin/asset). With the character designer, a player can modify his own player character as much as he want.

In the first version of the game the player can choose from 3 different characters:

1) Female character

2) Male character
3) Skeleton character (can be purchased in shop or achieved if a player hits 51 in a row)

Accessorise for every character like hats, bracelets/chains, boots, cloths, etc. can be bought at the store, if a player wants to give his character a unique style. This addition will be implemented later, when the character customization will be integrated.

Movement and animations

The character movements are solely for animations. There is no basic movement since the player just sits on his chair at the table.

There are a few core animations:

1) Entry animations: An entry animation is a add on which can be bought in the ingame store or earned through achievements. An entry animation plays every time a player with an entry animation enters the room. Player can only enter a room during the exchange phase.
2) Celebration animation: If a player guesses the correct card, his character will play a little celebration animation. Every character has his own celebration animation and the player can buy additional celebration animations in the store.
3) Defeat/elimination animation: If a player guesses the wrong card, his character will play a little defeat/elimination animation. Every character has his own defeat/elimination animation and the player can buy additional animations in the store. The standard animation should be a knock back (from the chair) animation with stars circling around the head of the defeated player. The animation will end, when the next active game round starts and the player stays at the table.
4) Card animations: If a player plays a special effect card, a special animation will play. Depending on the rarity of the card, the animation will be more or less big/crazy.

Special cards

All special cards are labelled with a level. Every special effect card can only be played once per active game and player, some are restricted to only once per active round and table. All special effect cards will be shown after the countdown has reached 0 to all players. If a identical special effect card played more than once, which has an effect for multiple players the effect will only take place once. No effects can be staked. However, the effects from cards will be activated due to priority and as higher the level of a card is as hight is its priority. For example. If multiple special effect cards have been played out,

the level 3 cards effects will be carried out bevore the level 2 Cards. If a player A plays the special effect card One for the team and Player B plays Sacrifice on player A, Player A will die due to the priority of the One for the team card over the Sacrifice card.

Level 1: Special effects, which do not have much of an impact on the game and do not last longer than one round.

Level 2: Special effects can be put on other players as well as the player owning/playing it. The effect lasts for one round.

Level 3: Special effects which can affect one or more player for more than one round.

Level 1:

- Mass intelligence: If more than 50% of the player on the table are right, the player who played the special effect card will survive.
- Protective Shell: The player survives this round no matter the card played by the GM.
- Seeker: See 3 out of 7 cards from the GM before he plays his next card.
- The secret of the past: Check all cards which have been played by the GM up to this point. Only available until Round 45.
- Equalizer: If another player plays the Even card and you play a Up or Down card and the outcome of the next card drawn by the GM is an even result (for example last round he draws a 6 of Heart and this round a 6 of Spades, its even) you will survive this round too.
- Early bird: This card can only be played at the very first round of an active game. If the player achieves a streak of 10 in a row, he will be protected in the 11th round for one round.

Level 2:

- All for all: If more than 50% of the player on the table are right, every player survives the round.
- Rewind time. Change the outcome of one players result but not your own after the GM played his next card. This card can only be received once per active round and player. No limitations on playing it out to all other players.
- Protective Shelter: All players survive the next round. This card can only be played once per round over all players. (once per game).
- Sharing is caring: Let all players see 3 out of 7 cards from the GMs hand. This card can only be played once per active round and table.

- Sacrifice: you can sacrifice your own round to protect another player on the table for one round. A player can only receive one sacrifice per active game and table. The player who plays the sacrifice card will be eliminated in the round he played the card, no matter the outcome of his own card played.
- 2 & 7: If the next card is a 2 or a 7, the player will survive the next 2 rounds no matter the outcome of the rounds.
- Protective Ace: If the next card drawn by the GM is an Ace, all players will survive the round no matter of the outcome of their hand.

Level 3:

- No secrets: Let all players see all 7 cards from the GMs hand. This card can only be played once per active round and table. Can only be played until round 40.
- Protective Fireplace: The player survives 3 rounds no matter which card the GM plays.
- Great prophet: See all 7 cards of the GM before the next card will be played by the GM. Can only be played until round 40.
- Lucky 7: If the next card played by the GM is a 7 the player will be protected by the next 3 rounds. Can only be activated until round 40.
- One for the team: The player who played this card will not survive the round. But every other player will, no matter the outcome of a the round. This card can only be played once per table.

Chat & report feature

The multiplayer mode has a chat function. It can swap between Global chat (in the lobby search/create menu), Friends chat (only for people in your friend list) and Table chat (only for player on the same table/room). Chat restrictions will be applied if chat is abused. No voice chat will be integrated.

The game needs a report system built in where the player can report suspicious or abusive behaviour. It needs to be accessible ingame, in death screen/spectator mode and after the game. It is important to detect potential cheaters, bug abusers or just mean and rude people.

Friendlist and player profile

You can add other players to your friendlist. You can add them by searching for their name and look up their profile or during a game while clicking on the character of a player to open up his profile.

In the player profile the player can add more information about him like gender, country he wants to represent or witch platform he wants to represent (Twitch, Youtube, Discord, Bigo,...), and also which VIP player he likes to follow.

Lobbies

Every table is a game lobby. Players can

1) create a lobby
2) enter an existing lobby (if they met the lobby criteria, set by the lobby owner/creator)
3) delete their created lobby (all player get kicked from the lobby, not possible to delete the lobby if the game has started)
4) leave a lobby.

Depending on the demand for lobbies, the lobbies can be split into regions, where every region runs on an individual server. More on that in the server section.

Ranking and High scores

Every player gets points, depending on his success in guessing the correct cards. There are points per correct guessed card, and minus points, if the card was guessed wrong. However, there are always more points to gain than to lose. Therefore, player usually get higher total scores if they play more. Bonus points are rewarded for longer correct guessing streaks. For example, every 5 correct cards in a row (5-10-15-20-...) will have a point multiplicator. Players will also get special cards as rewards if they manage to hit a certain amount of consecutive right guesses. Those special cards can be used in future matches/game rounds but not in the ongoing one. Therefore, all achievements come within the shop system/gift section. The player needs to claim the reward first, before using it in a game. The leaderboards will show the players with the most points in a ranking. The ranking is with all players in it and players can check the top 100 players and the next 50 players before them and the next 50 players behind them in the high score list. If two players have the same number of points, the one who achieved the points first will stay at the top.

Additional to the total point rankings a max streak ranking is included as well. The top 100 players with the highest streak of guessing the correct card in a row will be ranked there.

There will be rankings for “VIP” as well, where a player can choose a VIP player to follow or help in the rankings. This way popular player can combine points of followers to obtain top spots in a separate ranking. For example a player can choose various rankings like country ranking, platform ranking (Youtube, Twitch, etc.) and many more.

Several Ranking intervals can be displayed like Daily, Weekly, Monthly, yearly and All time hight rankings. On the base of those rankings different rewards can be distributed.

Rewards and Achievements

Players can get several rewards if they achieve ranking positions or streaks during the game. Following the Rewards and rankings, that can be obtained

Most points Ranking by the end of period:

10th -4th place	
Daily	100 D
Weekly	1’000 D
Monthly	10’000 D
Yearly	100’000 D
3rd place	
Daily	200 D
Weekly	2’000 D
Monthly	20’000 D
Yearly	200’000 D
2nd place	
Daily	300 D
Weekly	3’000 D
Monthly	30’000 D
Yearly	300’000 D
1st place	
Daily	1’000 D
Weekly	10’000 D
Monthly	100’000 D
Yearly	1’000’000 D

Highest streak per end of Period

10th -4th place	
Monthly	10’000 D
Yearly	100’000 D
3rd place	
Monthly	20’000 D
Yearly	200’000 D
2nd place	
Monthly	30’000 D
Yearly	300’000 D
1st place	
Monthly	100’000 D
Yearly	1’000’000 D

Achievements to unlock by progress (only obtainable once):

Winning your first game	10 D
Getting a streak of 5 within one active game round	50 D
Getting a streak of 10 within one active game round	1 random Level 1 Special Effect card
Getting a streak of 15 within one active game round	150 D
Getting a streak of 20 within one active game round	1 random Level 2 Special Effect card
Getting a streak of 25 within one active game round	500 D
Getting a streak of 30 within one active game round	1 random Level 3 Special Effect card
Getting a streak of 35 within one active game round	1’000 D
Getting a streak of 40 within one active game round	1 random Level 3 Special Effect card + 1’000 D
Getting a streak of 45 within one active game round	2 random Level 3 Special Effect card + 2’000 D
Getting a streak of 50 within one active game round	5 random Level 3 Special Effect cards + 5’000 D
Getting a streak of 52 within one active game round and complete the game.	**Jackpot win plus every available card once. Highest VIP Level forever**

Playing a game with other players on the table	50 D
Play 3 games with a friend of yours	30 D
Send a gift to another player	10 D
Send a total of 10 gifts to another player	100 D
Send a total of 100 gifts to another player	1’000 D
Send a total of 1’000 gifts to another player	10’000 D
Receive a gift from another player	20 D
Receive a total of 10 gifts from other players	200 D
Receive a total of 100 gifts from other players	2’000 D
Receive a total of 1’000 gifts from other players	20’000 D
Play your first Special Effect card	50 D
Play a total of 5 Special Effect cards	100 D
Play a total of 5 Special Effect cards in one active game round	200 D
Play more than 10 Special Effect cards in total	500 D
Play more than 100 Special Effect cards in total	10’000 D
Receive an effect of a Special Effect card five times	50 D
Receive an effect of a Special Effect card 10 times	100 D
Receive an effect of a Special Effect card 100 times	1’000 D

Title rewards

Title rewards can only be obtained by fulfilling specific conditions. A player can display one of his earned titles bellow his name. All titles are stored in his profile. There are unique titles which are only given to the first placed player on that particular topic. The unique titles will be transferred to other players if they overtake/pass the current title holder on the specific metric to gain the title.

Every time one of the unique titles switch holders, a system notification will be shown in all chatrooms. The old title holder will get a notification in his notification center.

The first	The first player to win a game in the history of Up and Down
Patient Zero	The first player to loose a game in the history of Up and Down
Winner Winner Chicken Dinner	Maintaining a minimum of 5 streak per active game round over 10 consecutive rounds
Millionaire	Spend over 1’000’000 Diamonds
Billionaire	Spend over 1’000’000’000 Diamonds
Kind heart	Gift over 100 gifts to other players
Protector	Safe more than 100 player from elimination
Great protector	Safe more than 1’000 player from elimination
THE Protector	Titel only granted the one player with the highest number of saved players. This title can only be obtained by one player at any time and is lost if another player overtakes the current holder in the numbers of saved players ranking.
Unlucky Fellow	Lose more than 10 active rounds in a row with your first card.
Black cat	Lose more than 100 active rounds in a row with your first card.
Jinx	Titel only granted the one player with the highest number of lost games in a row by the first card. This title can only be obtained by one player at any time and is lost if another player overtakes the current holder in the numbers of lost games in a row by the first card ranking.
Luck is everything	Win more than 10 first rounds in active rounds in a row.
Luck is not everything	Win more than 100 first rounds in active rounds in a row.
I AM LUCK	Titel only granted the one player with the highest number of consecutive first round wins in active rounds. This title can only be obtained by one player at any time and is lost if another player overtakes the current holder in the numbers of consecutive first round wins in active rounds ranking.
Gifter	Gift more than 10 gifts to other players
Your presence is a gift itself	Gift more than 100 gifts to other players

Santa Claus	Titel only granted the one player with the highest number of gifts sent to other players. This title can only be obtained by one player at any time and is lost if another player overtakes the current holder in the numbers of gifts sent to other players ranking.
Gifted	Receive more than 10 gifts from other players
Popular	Receive more than 100 gifts from other players
Idol	Titel only granted the one player with the highest number of gifts received from other players. This title can only be obtained by one player at any time and is lost if another player overtakes the current holder in the numbers of gifts received from other players ranking.
VIP	Purchase a VIP of the highest level for one week.
Dedicated VIP	Contain the VIP status of the highest VIP level for more than 5 Weeks
THE VIP	Titel only granted the one player with the highest number of consecutive weeks with the highest VIP level activated. This title can only be obtained by one player at any time and is lost if another player overtakes the current holder in the consecutive weeks with the highest VIP level activated. ranking.
Special Effect rookie	Play more than 10 Special Effect cards
Special Effect Master	Play more than 100 Special Effect cards
Magician	Titel only granted the one player with the highest number of Special Effect cards played. This title can only be obtained by one player at any time and is lost if another player overtakes the current holder in the numbers of Special Effect cards played ranking.
Shop user	Buy more than 10 things from the shop
Shop owner	Buy more than 100 things from the shop
Business mogul	Titel only granted the one player with the highest number of bought things from the shop. This title can only be obtained by one player at any time and is lost if another player overtakes the current holder in the numbers of bought things from the shop ranking.

Daily topshot	Win more than 5 daily top rankings
Daily master	Win more than 10 daily top rankings
Daily King	Titel only granted the one player with the highest number of daily top ranking wins. This title can only be obtained by one player at any time and is lost if another player overtakes the current holder in the numbers of daily top ranking wins.
Weekly topshot	Win more than 5 weekly top rankings
Weekly master	Win more than 10 weekly top rankings
Weekly King	Titel only granted the one player with the highest number of weekly top ranking wins. This title can only be obtained by one player at any time and is lost if another player overtakes the current holder in the numbers of weekly top ranking wins.
Monthly topshot	Win more than 5 monthly top rankings
Monthly master	Win more than 10 monthly top rankings
Monthly King	Titel only granted the one player with the highest number of Monthly top ranking wins. This title can only be obtained by one player at any time and is lost if another player overtakes the current holder in the numbers of Monthly top ranking wins.
Yearly champion	Win one or more yearly top rankings
Yearly King	Titel only granted the one player with the highest number of daily top ranking wins. This title can only be obtained by one player at any time and is lost if another player overtakes the current holder in the numbers of daily top ranking wins.
Among the tops	Place within the top 10 of the yearly rankings by the end of the ranking duration time.
Generation 42	Reach round 42 to receive this title
Champion	Granted to every player who is able to complete the game.
The first complete beeing	Granted to the first player who can achieve all titles
Complete beeing	Granted to every player who can achieve all titles
THE ONE	Granted to the player who achieves all title at the same time. This title can only be hold by one player at a time. If the title condition is not active anymore, the title will remain unusable by any player.

Jackpot (in the free to play version)

The game will have a Jackpot which will be gained by the player who finishes the game. After a player has finished the game the Jackpot will go down to 0 Diamonds and start to fill up again.

The first Jackpot will start with 10’000’000 Diamonds and 1% of all Diamonds purchased from the shop by players will be added to the jackpot sum.

If a player wins the game and is entitled to the jackpot, we need to ensure, that the jackpot is achieved legitimately. If the jackpot is achieved legitimately we reward the player with the jackpot Diamonds.

VIP Players

The VIP Status can be obtained by purchasing it in the shop. It needs to be renewed every week (it will automatically renew, if the player does not revoke it and as long as a player has enough Diamonds on his account). VIP Player get a special VIP Tag next to their name, their name will be in golden Letters, they get a special VIP Entry Animation and access to the VIP Maps. More VIP Content will be delivered over time. Depending on the VIP Level, the player will get the rewards.

Multilanguage

The game needs to be translatable in every language. It starts in English and the first Language to add is German. After the game is launched and works well with the audience, further languages will be added.

Game shop and microtransactions

One of the essential parts of the game is the ingame shop. In the shop a player can buy:

1) Daily bonuses and reward (free rewards, free cards or free Diamonds)
2) Diamond Packs
3) Special Effect cards
4) Character and Assecoires / Skins
5) Maps
6) VIP Levels
7) Coupons

8) Gifts.

The shop needs to be easy to access through the main menu (before lobby menu) and while playing in a lobby (shop button on map/table). Also, it should be able to accept all major payment methods.

Following items will be in the shop:

Daily Bonuses and rewards	Diomonds pack	Special cards	Characters and Assecoires	Maps	VIP Levels	Coupons	Gifts
• Daily bonus for playing the game. Random low lever reward	• 100 Diamonds for $1 • 1'100 D for $10 • 2'500 D for $20 • 6'500 D for $50 • 10'000 D for $85 • 15'000 D for $100 • 200'000 D for $1'000	• Special cards level 1 for 100 D per card • Special cards level 2 for 250 D per card • Special cards level 3 for 1'000 D per card	• Skelleton character for 1'400 D • Further Assecoires will be added to the shop.	• Moon map for 5'000 D	• VIP 1: VIP Badge next to name for 100 D/Week • VIP 2: VIP Badge and Golden Letters name for 200D/Week • VIP 3: All rewards from Lvl 2 + Custom Entry animation for 300 D/Week • VIP 4: all rewards from VIP 3 + VIP Map access for 500 D/Week	• Players can exchange Diamonds for Coupons. Like Amazon, Paysafe or any other coupon there is. • The coupon vallue will always be 90% of the Diamonds Value. For example a $10 Amazon coupon will cost 2'200 D (highest D/USD convertion rate + 10%) • Coupons allow to "Cash out" any price money which is distributed or earned by rewards.	• Several gifts to send to other players on the same table. For example a "Rose". A "Rose" costs 10 D and the receiving party gets 1 D added to their D count. • This feature can be added later on • Every gift has a small animation.

Start menu & menu screens

The game client has a login and then the player is in the main overview menu. From here he can choose a character, modify his characters, adjust settings, enter the shop, create or join lobbies etc. It is the general interface between games. He can dress his character or modify it. He can enter rankings and generally manage his account. The game development team has also the possibility to push news and information to the players via information menu (like shop updates or special events).

Dedicated Server/ infrastructure

Up and Down needs to run on a dedicated server. This is important to scale the project and be able to form as many lobbies as needed. It helps to make the game more secure to attacks and cheats as well. If functions can be executed by the dedicated server, it is

preferred to execute it there instead of the player client. Exact server infrastructure needs to be discussed further, before fully developing the game.

Subsystems can be used from Epic, Steam or Playfab (Microsoft). Please make a suggestion on your offer on how and where you would set up the infrastructure and why.

Anti cheat system

The multiplayer mode needs a dedicated anti cheat system. The focus is to protect lobbies from cheaters. Every cheater will be banned for life. It is important, that the player will never have access to information about the next card played or is in any way able to manipulate the game to his advantage.

It is important, that no bots or bot systems can run the game. Bot behaviour and auto click systems need to be detected and banned.

It is very important that the shop mechanism and the rewars system can not be cheated nor attacked.

It is VERY important, that the Jackpot requirement of winning the game can not be cheated!

Currently we have not decided on an anti cheat system or a method yet. Needs further discussion and your input is welcome.

Casino version

In this section we are going to explain a jackpot mode which is suited for casino games. Up and Down can be implemented with the game aggregator of SoftSwiss (softswiss.com) through their API. Please do offer a price for bringing the game in the environment of SoftSwiss to live. Soft Swiss has already developed significant parts of any game like User management, mechanics, transaction integration etc.

The casino Version has differences to the free to play game in terms of Graphics (could be in a 2D environment) and it will cost to play the game. Also, the Rapid game mode could have extra feature and extra jackpots to win. For example: one jackpot for 5 in a row, 10 in a row, 15 in a row, etc. And every player has to descide if he wants to play for these jackpots with the representative costs to it. For example, if a player wants to win all jackpots, he needs to pay more than if he only would like to get the 10 in a row jackpot. The decision needs to be made at the beginning of the game and depending on that, he will have to bet more or less.

Last but not least

1) The final product needs to be uploaded on the different stores (Apple App Store, Android Market, Steam, etc.)
2) The source code and any graphics and IP needs to be handed over to us. We will always be in control of all rights regarding every aspect of the game.
3) All rights will be reserved by us.
4) The product can be used commercially. All used assets need to fulfil this standard, and all the copyrights need to be transferred to us.
5) If you want to splitt the project into milestones with separate pay rates per milestone, we would gladly accept this as well. Please provide a detailed milestone list in your offer then.
